Project: Next.js Blog Web Application

- Create a simple blog application using Next.js that demonstrates routing, image optimization, font optimization, and the use of both client and server components.

Page
- Create a home page containing the list of all blogs, each blog having a title, author, body.
- Create a single blog page containing the whole blog data alongside a comments section (this section should be a bit tricky, consider using the right type of components for it)
- Create blog page (you can make use of the server actions here)
- Create an about page containing about us part

More details
- Use Next.js Image component for optimized images
- Use Google Fonts or a custom font
- Combine between client and server components (use client only when needed)
